an exciting new line of research that investigates the impact of one's own hands on visual processing has flourished in the past several years specifically several studies have demonstrated that objects near the hands receive prioritized attention enhanced perceptual sensitivity altered figure ground assignment prolonged and detail oriented processing and improved visual working memory taken together these results demonstrate that the visual system reveals a new pattern of processing when one's hands are in proximity of viewed

objects therefore the vast majority of studies on visual processing in which one's hands are kept away from the stimuli may constitute but one side of a more complex story of the inner workings of the visual system with several consistent behavioral demonstrations of hand altered vision now in the literature the present challenge facing this growing field and the aim of this research topic is four pronged 1 isolate and elucidate the underlying cognitive and neural mechanisms of hand altered vision 2 map the parameters and conditions of hand nearness that permit prevent the onset or maintenance of hand altered vision 3 determine the consequences of hand altered vision for higher level cognition and assess its applied potential e.g. as a neuropsychological intervention and 4 present a cohesive and predictive theoretical account of hand altered vision we welcome submissions that fit into any one or a combination of the above domains for behavioral research we particularly encourage submissions that are relevant to the advancement of our understanding of the neural mechanisms of hand altered vision e.g. demonstrations that might corroborate or disconfirm proposed neural systems

awarded one of bookauthority's best new particle physics books in 2019 hands on accelerator physics using matlab provides an introduction into the design and operational issues of a wide range of particle accelerators from ion implanters to the large hadron collider at cern many aspects from the design of beam optical systems and magnets to the subsystems for acceleration beam diagnostics and vacuum are covered beam dynamics topics ranging from the beam beam interaction to free electron lasers are discussed theoretical concepts and the design of key components are explained with the help of matlab code practical topics such as beam size measurements magnet construction and measurements and radio frequency measurements are explored in student labs without requiring access to an accelerator this unique approach provides a look at what goes on under the hood inside modern accelerators and presents readers with the tools to perform their independent investigations on the computer or in student labs this book will be of interest to graduate students postgraduate researchers studying accelerator physics as well as engineers entering the field features provides insights into both synchrotron light sources and colliders discusses technical subsystems including magnets radio frequency engineering instrumentation and diagnostics correction of imperfections control and cryogenics accompanied by matlab code including a 3d modeler to visualize the accelerators and additional appendices which are available on the crc press website matlab live scripts to accompany the book can be found here [ziemann.web.cern.ch/ziemann/mybooks/mlx](http://ziemann.web.cern.ch/ziemann/mybooks/mlx)

this is a hands on guide for both the budding astronomer in need of a mentor and the seasoned observer who wants to learn how to effectively share their knowledge with newcomers through decades of teaching observational astronomy at the high school and college level dr daniel e barth has inspired thousands of beginners and in this book he shares the many ways that you can learn and teach others too the chapters contain a plethora of practical projects in observational astronomy that can be done on your own or with others delighting any hobbyist with the many wonders of the night sky the activities are
